

NEW YORK, Nov. 14, 1936. The market for cotton futures was active and firm today, with prices generally higher than in the previous session. The main reason for the advance was the report that the government had decided to purchase 100,000 bales of cotton for the relief of the unemployed. This news was met with a sharp rally in the market, and prices advanced to new highs. The market was also influenced by the fact that the weather in the cotton producing regions was generally favorable, and there was no sign of a shortage of cotton. The market was expected to remain active and firm for some time to come.
