## MISCELLANEOUS.

**IMPORTANT TO COTTON PLANTERS.**

**By which their incomes may be doubled.**

THE undersigned has imported and obtained letters Patent from the United States for those improved and unrivalled machines for cleaning Sea Island Cotton into Yarns by one continuous process, from the Gin through the preparation and spinning machinery, until it is ready for shipment or weaving. The saving of COTTON WASTE will be at least Ten Per Cent., and as I contract with any gentleman or firm of machinery to prove the action into bales or to hand-ling at all, and allow it to open and disentangle it, which are very objectionable in those of ginning and spinning or carding machinery, my YARNS are made of unbroken fibre, and hence will, all the more count stronger, will command advanced prices, as they will be chemically composition in any medium.

The undersigned is prepared to dispose of privileges to use his patent; and Planters will be informed as to terms, with complete instructions how to use it, how to obtain the best machinery, and all other necessary particulars, on application personally or by letter, post paid, to the undersigned, at his rooms, corner Front and Dauphin streets, up stairs.

GEORGE C. HENRY.

**The Bagasse Kettle Train and Furnace.**

THE subscriber is now prepared to close contracts, with full guarantee, to take off crops with GIL-LMORE'S PATENT BAGASSE FURNACE AND KETTLE TRAIN, with a consumption of Wood not to exceed one-half a cord per hogshead for the entire boiling of the juice into Sugar, or one-third per hogshead for boiling grinding the Cane and Boiling the juice into Sugar.

The management of the Bagasse Kettle Train is precisely the same as now required for the old Set-Pan, employing an equal number of hands to clean the juice. The Furnace needs the attendance of but one hand, the Bagasse is not touched after it enters the Furnace.

For further particulars, inquire of

SAM. H. GILMAN,

jan3-6m-1m3p-dw-Sw 31 Natchez street.

**THE BAGASSE FURNACE.**

PATENTED Dec. 4th, 1856; same patent renewed August 6th, 1856, and new patent granted March 6th, 1856, to S. H. Gilman, of New Orleans. This furnace is now in use on EIGHTEEN plantations in Louisiana, and combines in its construction nearly the six important and destructive features of—

1. Working entirely by natural draught.
2. Containing no grate bars or other irons in its interior.
3. Never requiring the bagasse to be stirred or touched after it falls from the carrier into the hopper of the furnace.
4. Drying the Bagasse thoroughly in the furnace, where it remains, more than one hour, exposed to great heat, before it reaches the point of combustion.
5. Forming no slag, and the ashes being carried by the draught into a second chamber, and withdrawn at any time without stopping the sugar-mill.
6. Burning all the bagasse on plantations of any size, and requiring no other situation than to take out the ashes and occasionally throw in wood—the average consumption of which has been ONLY ONE-HALF A CORD IN TWENTY-FOUR HOURS, when the furnace fires and chimney were proportionate.

The furnace erected under the new patent of August 6th, 1856, are fed without rollers by a simple arrangement of balanced doors in the bottom of the hoppers, which open by the weight of the bagasse and require no attention whatever.

This is the only Bagasse Furnace which combines the above named features, and is now offered for practically.

An investigation of the patents, specifications and drawings (to be had of the subscribers) with personal inspection of the furnace in operation, will show that the two former are manufactured of such imperfect materials to possess elasticity and tenacity, and so combined with the latter as to form a roof not only durable and with inability to crack or decay, but one which is impervious to both fire and water—a combination never before obtained in a composition roof.

The advantages of "Warren's Improved Fire and Water-proof Roofs" may be summed up as follows:

It is both a water and fire-proof roof.

It will not expand and contract, with heat and cool, like metal roofs.

One ton to the 100 is all the inclination required. The roof can be walked upon without injury.

It can be used for drying purposes.

It is of great advantage to dwellings when adjoining buildings are on fire.

It is not at all cold in the least by changes of temperature.

The water is not affected by it.

It is not affected by the jarring of machinery.

It is cheaper than double the best of zinc, tin, or any painted iron, without danger to the boarding beneath.

It is easily and quickly repaired, if injured.

It is not affected by the LESS THAN THAT OF ANY FIRE-PROOF NOW KNOWN.

Gutters can be formed on the roof at a slight expense.

Insurance is effected at same rates as on buildings covered with other fire proof materials.

These roofs have been thoroughly tested in this climate, and experience has proved their decided superiority to all other roofing materials. We refer to those who have the longest used these roofs, and are therefore, best qualified to judge of their great value.

Further information may be obtained by addressing, through the Postoffice, the subscribers, who are the only persons authorized to sell the roofs of this description in this vicinity.
