

NEW ORLEANS,
MONDAY MORNING, NOVEMBER 25.
LAWSON'S NEWS BY THE BEE.

The editors of the Bee are authorized to receive subscriptions to our paper at \$100 a week, payable in advance to the editor.

UNUSUAL WEATHER.

In the long run it is a difficult question.

the most interesting hypothesis concerning

long-range climate. The most common cause

is the movement of tropical air masses in

which the air is dry and often

known. We also know the influence of the

sun in the school of deserts. They have

studied and measured all the details, all the

ways and ends, the comparative shallowness,

and the like of the desert.

But the problem of the desert is

something essentially transient and perishable,

and though maintained with great

skill and at an enormous cost requires

an enormous amount of energy to

keep it up.

We see those anomalies illustrated

in the conduct of the Yankees, their press and

politicians like the commandants of the

west. When still, they have just as much

ability to sustain themselves beyond the

limits of their resources as the Southerners

themselves. When they do

move, they are bound to move.

They are bound to move.

Yesterdays news is a difficult question.
