LOOK ORIGINALITY. A Frenchman claims that all American women dress alike.

WOMAN'S PROGRESS IN JAPAN. The Emperor and the Empress both believe in modern ideas.

ABOUT TREE RINGS. Correctness of the theory that they denote age proved.

PLATINUM IN RUSSIA. The rare metal found chiefly in the Ural Mountains.

ONLY WOMAN'S THEATER. Paris is building the first of its kind in the world.

ANIMALS IN HISTORY. Important part that they have played since the Adam incident.

SOME DULL BOYS. With a bad beginning they afterward became famous.

TOO MUCH PLOT. Why so many dramatized novels have been complete failures.

NO JAPANESE RECIPROcity. They will discover our secrets but we can't theirs.

NEVER HEARD FROM. Ships that have sailed from Fort Not to return.

A Mouse's Century Run. A wheelman of Corinna, Mich., has taken a mouse for the addition of 98 miles to his cyclometer record.

A Bicycle Croquet. Bicycle croquet is the latest novelty for cyclists.

The "Black Death." An eminent Swiss specialist, Dr. Wandin, a pupil of Pasteur, declares his conviction that the plague which has prevailed in southern China since 1894, and in British India since 1896, is the genuine black death of the middle ages, and that it will in all probability reach Europe in a year or two.

At last the women of Japan are beginning to get their ining. The emperor himself is interested in their advancement.

These yearly rings, in addition to being sufficiently well defined to be readily counted, are alternately bands of lighter and darker colors, the former being the "spring wood," as it is known to forestry experts.

Women of every country hereafter will be at liberty to defend their interests, assert their privileges and air their grievances through the medium of the drama or the opera.

According to the Moslem creed certain animals besides man are admitted into Heaven. Among them are Balsam's ass, which reprieved the disobedient prophet; Solomon's ant, which rebuked the sluggard; Jonah's whale, the ram of Imael, caught by the horns and offered in sacrifice instead of Isaac; the dog Kratim of the Seven Sleepers of Ephesus; the camel of Salek, the cuckoo of Belkis, the ox of Moses, and Al-Borak, that conveyed Mahomet to Heaven.

With a bad beginning they afterward became famous. When he was a lad in school, Sir Isaac Newton was at the bottom of his class more than half the time.

Henry Ward Beecher used always to break down when asked—as he was every Sunday, when a boy—to recite the catechism.

"Dance he is, and dance he will remain," is what Prof. Dalzell, Walter Scott's teacher, used to say of the boy whose novels are still standards of English story telling.

Charles Darwin, in his autobiography, tells us that he "had much zeal for subjects which interested him," which possibly could be said of the dullest boy that ever vexed a teacher's heart.

H. Rider Haggard, the novelist, was a pupil in Ipswich school, and is described as a tall, lean youth, with a thick crop of unkempt hair, sharp features, prominent nose, and eyes which had rather a wild look about them.

A wheelman of Corinna, Mich., has taken a mouse for the addition of 98 miles to his cyclometer record, says the New York World. He hung his bicycle from his cellar ceiling, the other evening, not far from a swinging shelf, where food was kept. A mouse bent on supper reached the shelf, and when he had sampled the viands leaped to the tire of the front wheel. That immediately began to revolve, and the mouse naturally ran to the highest part of it. It could stay on the top of the tire and it couldn't get enough foothold to jump to the wall. So it ran round and round, the revolving wheel, and the next morning was found, almost exhausted, but still running, with 98 miles to its credit.

Bicycle croquet is the latest novelty for cyclists. It requires a nicety of balance and a delicacy of touch. The regulation hoops and balls are used, but it is preferable that the handles of the mallets should be a little longer than those in everyday use. If the extent of the lawn will permit it, the distance between the hoops may be increased. The rules as to the progress of the ball are the same as in the usual game. It is permissible to advance the balls either by blow of the mallet or by a deft contact with the front wheel. When the wheel of the cyclist playing strikes the wrong ball he loses his play. When a player dismounts before the end of the game he is compelled to commence again.

At last the women of Japan are beginning to get their ining. The emperor himself is interested in their advancement. He hopes in time that they will attain the same position enjoyed by the women of Europe and America.

These yearly rings, in addition to being sufficiently well defined to be readily counted, are alternately bands of lighter and darker colors, the former being the "spring wood," as it is known to forestry experts, while the latter is the "summer wood."

Women of every country hereafter will be at liberty to defend their interests, assert their privileges and air their grievances through the medium of the drama or the opera, for Paris is building the first and only woman's theater in the world.
