WHEN WISCONSIN'S LOW-PRICE, PROSPECTING PESTS GO TO THE MOUNTAIN
dice of the Northwest.

To meet the challenge of the
mountain pests, the Wisconsin
Department of Conservation and the
University of Wisconsin have
blurred the line between the
knowledge of those who
specialize in plant diseases and
the knowledge of those who
specialize in mountain pests.

The result is a new course in
Mountain Pest Control, which
will be offered for the first time
this fall at the University of
Wisconsin.

The course will be taught by
Dr. J. H. Miller, who is
director of the Wisconsin
Institute of Mountain Pest
Research.

The course will cover the
biology, ecology, and control of
the mountain pests, including
the mountain pine beetle, the
mountain spruce beetle, and the
mountain hemlock looper.

The course will also cover
the use of chemical, mechanical,
and biological control methods.

The course will be offered for
credit in the College of Agriculture.

If you are interested in taking
the course, please contact Dr.
J. H. Miller at the University of
Wisconsin.

This program is made possible
through the support of the
Wisconsin Department of
Conservation and the
University of Wisconsin.
